Don't Modify Your Application Around A Display System - **Choose a Custom Design!**

Standard products just won't work? No problem. The important thing is that you get exactly what you need. Don't modify your application around the display system, let VarTech design to your specific needs. Standard CRT monitors and/or Flat Panel display systems are often adequate for typical operator control and monitoring applications. Sometimes, however, you require simple changes to be made – for example, your own logo on the user interface, different chassis or bezel colors. However, at times you may need more essential modifications such as mechanical customizations to the chassis, user controls positioned in a different way or perhaps your video format is non-VESA standard.

VarTech Systems Inc. is a leader in traditional and specialty display solutions. They are available to configure a fully functional CRT-based or LCD-based display system to meet your exact needs. Their Engineering Team has taken great care in designing their standard "commercial" products in such a way so as to allow for customized mechanical and electrical changes to address various mission critical applications. This procedure allows VarTech to provide the product you need at affordable costs. As well, VarTech's products incorporate the latest technological advances assuring the highest quality display system possible. From simple modifications of existing products to complete new designs, VarTech will entertain any request.
