

## VT9136-S-FM Installation Guide

### Step 1 Pole Assembly

Be sure the mount is securely fastened to the surface before beginning.

**Single:** Insert the pole into the stand and tighten set screw in back of stand using the 3/32" allen wrench.

**Double:** Follow above step, insert the second pole inside the first pole at preferred height and tighten the set screws with the 3/32" allen wrench that is provided.

### Step 3 Bracket Assembly Continued

Align the filter and VESA bracket with the hole pattern on the back of the flat panel monitor.

Use the four (4) M4-12 Philips Pan Head screws to attach the plate to the back of the LCD monitor.

### Step 1A Pole Height Adjustment

To adjust the position of the figure 8 adapter, loosen the thumbscrew and collar under the adapter. The adapter and collar will easily slide up and down the mounting pole. Once the desired position has been reached, tighten the thumbscrew and the set screw.

\*If you are assembling the Double, do this for both upper and lower collars.

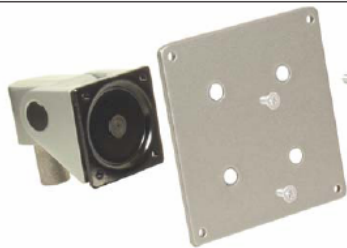

### Step 4 Monitor to Arm Assembly

After securing the plate to the flat panel insert the tilter into the arm.

Use the 10-32" Philips Pan Head screw and washer and fasten them to the hole in the underside of the tilter shaft, locking the monitor in place.

### Step 2 Attach Tilter/VESA bracket to the monitor

Carefully remove the base from the flat panel monitor. (See your monitor's User's Guide for instructions on how to do this.)

Attach the adapter plate (75MM or 100MM) to the tilter mechanism, using four (4) #10-32 x 3/8" Flat Head Philips screws.

### Step 5 Tilt Mechanism Adjustments

Tilt the monitor so it faces upward and locate the set screw under the tilter. Insert the 7/32" Allen wrench into set screw to adjust the tilt friction.

\* To tighten friction turn the wrench to the right.

\* To loosen, turn the wrench to the left.

### Step 6 Cable Management

Use the cable clip to keep cables organized and in tact around the pole.

\*Double models will have 2 cable clips.
